EDUCATION
Keep Your Students Healthy

Healthy students learn better, leading to higher grades. But as more and more funding is invested on our education system, absenteeism has become not only a health issue but an economic one.

Schools and universities need to be diligent about responding to the outbreak of illness, while also responding to the pressure from parents and faculty to keep facilities germ free. Students tend to have reduced levels of personal hygiene so the greatest risk of infection comes from surfaces touched by multiple people.

Kill Germs
Where they live

Hand washing programs have had a measurable effect in decreasing absenteeism but as soon as the student touches any surface the hands are contaminated again. Sanondaf kills the germs on the surface where they flourish and because it dries-on-contact there is no need to wipe or rinse.

Sanondaf can be used everywhere in your school to stop the spread of germs. Sanondaf Spray can also be helpful in sanitizing high usage objects known as germ 'hot spots' such as:

BUSES & TRANSPORT	**PHONES & OFFICE**	**DOOR HANDLES**	**TOYS & GAMES**
GYM EQUIPMENT	**TOILET SEATS**	**WATER FOUNTAINS**	**HEADPHONES & INSTRUMENTS**

Protect Students
& Athletes

Student Athletes are feeling the affects of harmful germs. Whether wrestling, football, basketball or cricket, all shared athletic equipment creates a breeding ground for infection. Kill germs before infections can spread – which can lead to hospitalization and even death in some cases.

Safe **& Effective**

The latest generation of SANONDAF touch-less disinfection solutions combines the effects of SanoFog and SanoChem. The dual effect of the SanoFog Machine and SanoChem enables the air and the surface in a room to be disinfected automatically.

SanoChem is a patented, highly effective, oxidizing disinfectant that kills 99.99% of all hazardous germs and bacteria without posing a threat to your students, teachers and instructors.

The SanoFog Device was developed around a heating and ionizing turbine that sprays the SanoChem liquid transformed into dry fog.
