

TRANSPORTATION

Transporting Safely

The expansion of transportation networks for people, goods and services enhances the quick circulation of infectious agents whether transporting locally, nationally or internationally. The disinfection of transport systems leads to a significant decrease in contamination risks and can eliminate a particular virus spreading from one place to another.

Sanondaf offer a cost effective and convenient way to ensure harmful germs are not spread while in transport.

Air Quality is often the missing link in **Train, Bus and Aircraft safety**

"People who have recently taken a train, bus or plane journey are more likely to find their next stop in the doctors office".

Food Safety

Whether produced domestically or abroad food travels hundreds or thousands of miles and passes through many hands before it ends up on the grocery store shelf. Studies have shown that 90% of all foodstuffs will be transported by truck at some point during the journey, if not the entire time. Every link in the chain of transportation has the potential to contaminate our food, by using Sanondaf all transport carriers can help eliminate contamination.
